Hiring Team - Intern Machine Learning

Center for Disability Services · Albany, New York, USA

Dear Hiring Team,

Your requirement to **develop and implement machine learning models for experimental and sensor-based data** maps directly to what I do: at EURECOM, I fine-tuned **CLIP ViT-L/14 (428M parameters)** on **250,000 samples** spanning 25+ generator types, ranking **#1 on the private leaderboard** - designing the full training loop, ablation experiments, and inference pipeline from scratch under real hardware constraints.

To support your **data collection, processing, and analysis workflows**, I engineered an end-to-end **ML pipeline** over **100,000+ telemetry records** at Orange Maroc - reducing manual analysis time by **~60%** and delivering segmentation results that informed commercial decisions. For **embedded and prototype systems** work, my unsupervised transformer autoencoder for industrial audio fault detection (AUC **0.80**, no labeled anomalies required) demonstrates experience building lightweight, deployable models under constrained conditions.

Center for Disability Services applies technology directly to improve how people function day-to-day - prototype systems built here reach people with real needs, not benchmark leaderboards. I want to contribute ML work that ships into assistive hardware. I would welcome a conversation about how my background fits your current prototyping cycle.

Sincerely,

AYMANE AIT DADS
