Hiring Team - Software Engineer Intern

HERE Technologies · Eindhoven, Netherlands

Dear HERE Hiring Team,

HERE's High Definition Maps depend on **intelligent, data-driven methods for data fusion** across disparate sources - exactly the problem I tackled at Orange Maroc, where I engineered an **end-to-end ML pipeline** over **100K+ network telemetry records** using Random Forest and KMeans, reducing manual analysis time by ~60% while mapping results directly to business decisions.

On the **research and evaluation** side, I ranked **#1 on the EURECOM leaderboard** by fine-tuning a **428M-parameter CLIP ViT-L/14** on 250K samples - running systematic ablation experiments across unfreezing depth, learning rate schedules, and augmentation strategies to prove what generalizes under distribution shift. For **automation and testing**, I built a 10-view test-time augmentation inference loop in **Python/PyTorch**, the same stack HERE uses for map healing evaluation.

HERE sits at the intersection of geospatial AI and autonomous systems - applying ML to heal HD Maps at scale is one of the few problems that demands both rigorous experimentation and production-grade engineering simultaneously. I would welcome the chance to discuss how I can contribute to that work this summer.

Sincerely,

AYMANE AIT DADS
