## Hiring Team - AI & ML Intern

Resolve Tech Solutions · Juno Labs

Dear Hiring Team,

Your posting asks for someone who can support the **design, development, and testing of AI and ML models** to solve real-world business challenges - that maps directly to my work ranking **#1 on the EURECOM leaderboard** for AI-generated image detection, where I fine-tuned a **428M-parameter CLIP ViT-L/14** across 250K training samples spanning 25+ generator types, running structured ablation experiments on unfreezing depth, learning rate schedules, and augmentation strategies to arrive at a solution that generalised out-of-distribution.

On **data preparation and model experimentation**, I engineered an end-to-end ML pipeline at Orange Maroc processing **100K+ network telemetry records** - covering raw ingestion, feature engineering, cross-validated evaluation, and **KMeans segmentation** that mapped 5 user performance profiles to commercial service tiers, reducing manual analysis time by **~60%**. On **performance evaluation**, I benchmarked transformer autoencoders for unsupervised fault detection on industrial audio, achieving **AUC 0.80** with no labeled anomalies, evaluated on a DCASE-style protocol against state-of-the-art baselines.

Resolve Tech Solutions' focus on applying AI to concrete business problems - not just research prototypes - matches exactly how I have operated: every model I have built produced a decision or a metric that mattered to someone outside the lab. I would welcome the chance to bring that same discipline to the Juno Labs team this summer.

Sincerely,

AYMANE AIT DADS
