Hiring Team - SAP iXp Intern - AI Machine Learning

SAP SE · Sophia Antipolis, France

Dear SAP iXp Hiring Team,

SAP's iXp program is built for builders who bring real AI skills to problems that touch **80% of global commerce** - that is exactly the environment where my work belongs. Ranked **#1 on the EURECOM private leaderboard** for AI-generated image detection, I fine-tuned a **428M-parameter CLIP ViT-L/14** on 250K samples spanning 25+ generator types, designing ablation studies across unfreezing depth, learning rate schedules, and augmentation strategies to prove that one-epoch fine-tuning generalizes better than extended re-training.

At **Orange Maroc**, I engineered an end-to-end **ML pipeline** over **100K+ network telemetry records** combining Random Forest and KMeans, cutting manual analysis time by **~60%** and mapping 5 user performance profiles directly to commercial service tiers - proof that I translate models into business decisions, not just accuracy scores. Separately, I built a **transformer autoencoder** for unsupervised industrial fault detection achieving **AUC 0.80** with no labeled anomalies, benchmarked against DCASE-style evaluation protocols used across the industry.

SAP's Business AI strategy - embedding machine learning directly into S/4HANA and the Business Technology Platform at enterprise scale - is precisely the production-grade context I want to work in. I would welcome the chance to discuss how my pipeline and fine-tuning experience can contribute to your team this summer.

Sincerely,

AYMANE AIT DADS
