## Hiring Team - Agentic AI Intern (Hybrid, minimum of 5 Months)

Tyco Electronics Singapore Pte Ltd (TE Connectivity) · Singapore

Dear TE Connectivity AI Team,

Your listing calls for someone to **design and build agentic AI systems** on real industrial engineering problems - not a passive internship. At EURECOM, I ranked **#1 on the class leaderboard** by fine-tuning **CLIP ViT-L/14 (428M parameters)** on 250K samples spanning 25+ generative model types, running rigorous ablation studies over unfreezing depth, learning rate schedules, and augmentation strategies to push out-of-distribution robustness. I build systems under real constraints, not just notebooks.

Two results directly relevant to TE's AI Hub: First, I built a **transformer autoencoder for unsupervised anomaly detection on industrial audio** (AUC **0.80**, zero labeled anomalies required) - exactly the kind of fault-detection signal industrial engineering teams need. Second, at **Orange Maroc** I owned an **end-to-end ML pipeline on 100K+ telemetry records**, cutting manual analysis time by **~60%** and delivering segmentation outputs that directly shaped commercial go-to-market decisions - evidence I can connect AI output to engineering stakeholder impact.

TE Connectivity's decision to establish a dedicated AI Hub inside Corporate R&D in Singapore - focused on frontier AI meeting industrial engineering at scale - is the specific environment where the work I do converts into product decisions, not slide decks. I would welcome the chance to discuss how I can contribute starting May 2026.

Sincerely,

AYMANE AIT DADS
