Hiring Team - Applied Machine Learning Intern

WaveWorks Technologies Inc

Dear WaveWorks Hiring Team,

Your requirement to work on **live deployment data** for an active industrial site maps directly to what I built at EURECOM: a **transformer autoencoder for unsupervised anomalous sound detection** on industrial equipment - no labeled anomalies required - evaluated on a DCASE-style protocol and reaching **AUC 0.80** against state-of-the-art unsupervised baselines.

On the data side, I engineered an end-to-end pipeline over **100K+ telemetry records** at Orange Maroc - handling raw ingestion, cleaning, alignment with ground truth labels, and cross-validated evaluation - cutting manual analysis time by **~60%**. On the modeling side, my audio project used **Mel spectrograms with SpecAugment** to benchmark feature representations across real **audio/time-series** conditions, exactly the workflow your team needs for processing and structuring large-scale industrial audio datasets.

WaveWorks sits at the intersection of applied AI and industrial environments - a space where model performance is only meaningful if the pipeline holds up on live data. That constraint is where I do my best work. I would welcome the chance to discuss how I can contribute directly to your active site deployment.

Sincerely,

AYMANE AIT DADS
