Hiring Team - Software Dev Engineer Intern Machine Learning, Amazon Robotics

Amazon Development Center Germany GmbH · Berlin, Germany

Dear Amazon Robotics Hiring Team,

Amazon Robotics builds **scalable ML systems** that directly impact real-world physical operations - exactly the environment where I thrive. Fine-tuning **CLIP ViT-L/14 (428M parameters)** on **250,000 training samples** to rank **#1 on the EURECOM leaderboard** taught me that shipping a production-grade vision model means solving for generalization under real constraints, not just chasing benchmark numbers on a held-out validation set.

At Orange Maroc, I engineered an **end-to-end ML pipeline** processing over **100K network telemetry records** using **Random Forest and KMeans**, reducing manual analysis time by **~60%** and mapping outputs directly to business decisions - the kind of pipeline ownership Amazon Robotics expects from engineers writing code that runs in warehouse-scale environments. Separately, my transformer autoencoder for **unsupervised anomalous sound detection** achieved **AUC 0.80** with no labeled anomalies - directly relevant to fault detection in robotic systems where labeled failure data is scarce.

Amazon Robotics sits at the intersection of perception, real-time inference, and physical-world constraints - a harder version of every ML problem I have worked on. I want to contribute to that stack, and I would welcome the chance to discuss how my experience applies. I am available to start in summer 2026 and open to relocating to Berlin for the internship duration.

Sincerely,

AYMANE AIT DADS
