## Hiring Team - Research Intern - GHAI-3

Fujitsu Research of America · Santa Clara, CA, USA

Dear Fujitsu Research of America Hiring Team,

The Space Data Frontier Research Center's focus on integrating **artificial intelligence**, sensing, and modeling to address large-scale scientific challenges maps directly to work I have already shipped: ranked **#1 on the EURECOM private leaderboard** by fine-tuning **CLIP ViT-L/14 (428M parameters)** on 250K images spanning 25+ generative model families, designing the full experimental pipeline from data ingestion through out-of-distribution-robust inference.

To support evidence-based decision-making - a stated goal of your lab - I ran structured **ablation studies** across transformer block unfreezing depth (4/6/8 layers), learning rate schedules, and augmentation strategies, proving 1-epoch fine-tuning generalizes better than extended re-training. Separately, at Orange Maroc I engineered an end-to-end **ML pipeline over 100K+ telemetry records** using **Random Forest and KMeans**, reducing manual analysis time by **~60%** and mapping outputs directly to operational decisions presented to senior management - the kind of bridge between research rigor and real-world impact your center is building toward.

Fujitsu's explicit commitment to combining AI with domain knowledge for societal-scale problems - not just benchmark chasing - is the research environment I want to contribute to. I would welcome the chance to discuss how my work fits the center's current projects.

Sincerely,

AYMANE AIT DADS
