Hiring Team - Data Science Intern

Innovative Technology · United Kingdom

Dear Hiring Team,

Your listing calls for someone with a **solid understanding of machine learning techniques and algorithms** and a **practical approach to solving problems** - that is precisely how I ranked **#1 on the EURECOM leaderboard** by fine-tuning a 428M-parameter CLIP ViT-L/14 on 250K images spanning 25+ generator types, running structured ablation experiments to prove that 1-epoch fine-tuning outperforms extended re-training on out-of-distribution data.

Your role requires both **machine learning implementation** and strong **Python programming**. At Orange Maroc, I engineered an **end-to-end ML pipeline** across **100K+ network telemetry records** using **Random Forest and KMeans** in Python, cutting manual analysis time by **~60%** and delivering segmentation results that directly shaped commercial service-tier decisions - a pipeline I owned from raw ingestion to executive Power BI dashboards. Separately, I built a complete **NLP sentiment pipeline** in Python - tokenization, TF-IDF, word2vec, transformer fine-tuning - improving classification accuracy by **12 percentage points** over baseline.

Innovative Technology's focus on applied data science in real business contexts maps directly to how I work - I ship pipelines that inform decisions, not just experiments that stay in notebooks. I would welcome the chance to bring that same end-to-end ownership to your team this summer.

Sincerely,

AYMANE AIT DADS
