Hiring Team - Intern: AI Native Process Automation

Jaan Health / Phamily · New York, USA

Dear Phamily Hiring Team,

Your posting calls for someone who has proactively experimented with **AI-powered automation platforms** to **streamline high-volume operational processes** - independently, outside of coursework. At Orange Maroc, I did exactly that: I independently owned an **end-to-end ML pipeline** on 100K+ live telemetry records that cut manual analysis time by roughly 60%, then translated the output directly into executive-ready dashboards presented to senior management.

On the automation and tooling side, I have built production-grade pipelines that go from raw ingestion to decision-ready output with no hand-holding - at Orange Maroc, **KMeans segmentation** mapped **5 distinct user profiles** to commercial service tiers, directly informing go-to-market decisions. On the AI-native experimentation side, I ran rigorous **ablation studies** fine-tuning a **428M-parameter CLIP model** on **250K samples**, landing **#1 on the EURECOM leaderboard** - the kind of bias-toward-shipping mindset your role describes.

Phamily sits at the intersection of chronic disease management and AI-driven care operations - a context where automating the right workflow has direct patient impact, not just efficiency gains. I want to bring that same end-to-end ownership to your operational automation work this summer. Happy to connect at your convenience.

Sincerely,

AYMANE AIT DADS
