Hiring Team - Applied AI Engineering Intern (m/f/d)

GE Aerospace · Munich, Germany

Dear GE Aerospace Hiring Team,

Your posting calls for someone who can bridge **data, tools, and cutting-edge AI technologies** to solve real-world engineering problems - that is exactly what I built at scale when I ranked **#1 on the EURECOM leaderboard** by fine-tuning a **428M-parameter CLIP ViT-L/14** on 250K images spanning 25+ generator types, applying FP16 mixed precision and test-time augmentation to maintain robustness under out-of-distribution conditions.

On the **data engineering** side, I shipped an end-to-end **ML pipeline** at Orange Maroc processing **100K+ live telemetry records** with Random Forest and KMeans, cutting manual analysis time by **~60%** and mapping 5 user performance profiles directly to commercial service tiers - delivered through executive-ready **Power BI dashboards**. Separately, I built a transformer autoencoder for unsupervised fault detection on industrial audio, reaching **AUC 0.80** with no labeled anomalies, a problem structure directly analogous to predictive maintenance on aerospace equipment.

GE Aerospace's work on AI-driven diagnostics for next-generation propulsion systems - where sensor data complexity rivals anything in telecommunications - is precisely the environment where my combination of rigorous ablation methodology and production pipeline discipline applies. I would welcome the chance to discuss how I can contribute this summer.

Sincerely,

AYMANE AIT DADS
