Hiring Team - Research Intern

Iterative Health · Boston, MA, USA

Dear Iterative Health Hiring Team,

Your posting asks for a Research Intern who will assist with **reviewing protocols for patient eligibility criteria** and support the daily conduct of clinical research studies - work that demands both rigorous attention to structured data and the discipline to operate within tightly defined scientific protocols. At EURECOM, I ranked **#1 on the class leaderboard** by running systematic ablation experiments across unfreezing depth, learning rate schedules, and augmentation strategies on a **250K-sample dataset** - exactly the kind of protocol-driven, evidence-first methodology that clinical research depends on.

Two results speak directly to the demands of this role. First, at **Orange Maroc** I owned an end-to-end data pipeline covering **100K+ records**, reducing manual analysis time by **~60%** - demonstrating I can process and structure large, heterogeneous datasets to surface actionable findings for senior stakeholders. Second, my unsupervised anomaly detection project achieved **AUC 0.80** on an unlabeled industrial dataset, showing I can extract signal from ambiguous, real-world data without relying on clean ground truth - a constraint common in early-phase clinical trial data.

Iterative Health sits at the intersection of GI clinical trial execution and AI-powered site enablement across **80+ global research sites** - a scale where structured data discipline and rigorous experimentation directly translate into faster paths to novel therapeutics for patients. I would welcome the chance to discuss how I can contribute to your research team this summer.

Sincerely,

AYMANE AIT DADS
