Hiring Team - AI Research Intern - Agentic AI

Samsung Research UK · Staines-upon-Thames, United Kingdom

Dear Samsung Research UK AI Team,

Translating **cutting-edge research into real-world impact** is exactly what I did when I ranked **#1 on the EURECOM leaderboard** by fine-tuning a **428M-parameter CLIP ViT-L/14** on 250K samples - not just training a model, but designing ablation studies across unfreezing depth, learning rate schedules, and test-time augmentation to produce a system that generalizes to unseen generator types out of the box.

Building agents that act reliably under real-world constraints requires both research rigor and engineering discipline. My transformer autoencoder for **unsupervised anomaly detection** reached **AUC 0.80** with zero labeled anomalies - a direct analogue to agentic systems that must reason under uncertainty. At Orange Maroc, I owned an **end-to-end ML pipeline** processing **100K+ telemetry records**, cutting manual analysis time by **60%** and feeding decisions directly into commercial strategy - proving I ship systems, not just experiments.

Samsung Research UK is where mobile AI architecture gets defined before it reaches a billion devices - the agentic AI work coming out of SRUK directly shapes on-device intelligence for the Galaxy ecosystem. I would welcome the chance to discuss how my background fits your current research agenda.

Sincerely,

AYMANE AIT DADS
