Hiring Team - AI Machine Learning Engineer I (Intern) - United States

Cisco Systems, Inc. · San Jose, United States

Dear Cisco AI/ML Hiring Team,

Building **next-generation AI/ML solutions** that hold up under real constraints is exactly what I did when I ranked **#1 on the EURECOM private leaderboard** by fine-tuning **CLIP ViT-L/14** (428M parameters) on 250K images spanning 25+ generator types - designing ablation experiments, FP16 mixed precision training, and 10-view test-time augmentation to maximize out-of-distribution robustness on a single T4 GPU.

Collaborating across platform and engineering teams is a workflow I know firsthand: at **Orange Maroc**, I independently owned an **end-to-end ML pipeline** over **100K+ telemetry records** - from raw ingestion through **Random Forest** modeling and **KMeans** segmentation to executive-ready **Power BI** dashboards - reducing manual analysis time by **~60%** and directly informing commercial service-tier decisions. On the **security** side, my AI-generated image detection system was built to stay robust against novel generator types never seen during training, the same generalization challenge that matters in network threat detection.

Cisco's push to embed AI across its networking and security portfolio - from Cisco AI Defense to the broader Cisco Networking Cloud - means ML models here ship into infrastructure that millions of enterprises depend on. That scale of production impact is where I want to build. I would welcome the chance to discuss how my work fits your team's roadmap.

Sincerely,

AYMANE AIT DADS
