Hiring Team - SAP iXp Intern - AI Research PhD Associate (Summer 2026)

SAP · Palo Alto, United States

Dear SAP iXp Recruiting Team,

Your role calls for someone who can **perform state-of-the-art research to advance Machine Learning and Artificial Intelligence** - and apply that research to real product impact. At EURECOM, I ranked **#1 on the private leaderboard** for robust AI-generated image detection by fine-tuning **CLIP ViT-L/14 (428M parameters)** on 250K samples spanning 25+ generator types, designing ablation studies across unfreezing depth, learning rate schedules, and augmentation strategies to prove where generalization breaks down.

The JD highlights **Foundation Models on Structured, Tabular Data** and **scalable access to business data using LLMs** as focus areas. At Orange Maroc, I engineered an end-to-end **ML pipeline over 100K+ network telemetry records**, combining Random Forest with KMeans segmentation to map 5 distinct user profiles directly to commercial service tiers - cutting manual analysis time by **~60%** and delivering outputs to senior management via executive-ready dashboards. Bridging model outputs to business decisions is where I work best.

SAP touches **80% of global commerce** and sits on some of the richest enterprise datasets in existence - exactly the environment where research on structured data and knowledge-graph-augmented LLMs has the highest real-world stakes. I would welcome the chance to discuss how my work aligns with your Summer 2026 research agenda.

Sincerely,

AYMANE AIT DADS
