Hiring Team - PhD Data Scientist, Intern

Stripe · San Francisco, United States

Dear Stripe Data Science Hiring Team,

Stripe's need for data scientists who can turn **ambiguous business questions into rigorous, production-ready analyses** maps directly to what I built at Orange Maroc: an **end-to-end ML pipeline on 100K+ telemetry records** that identified the top 3 network-quality drivers, reduced manual analysis time by 60%, and fed directly into go-to-market decisions - owned entirely by me, from raw ingestion to executive-ready dashboards.

On the modeling side, I fine-tuned **CLIP ViT-L/14 (428M parameters)** on **250K training samples**, ranking **#1 on the EURECOM private leaderboard** by running structured ablation experiments across unfreezing depth, learning rate schedules, and augmentation strategies - the kind of statistical rigor and experimental discipline Stripe expects when conclusions drive real product decisions. Separately, I applied **KMeans segmentation** to map 5 distinct user profiles to commercial service tiers, translating model output into a concrete business recommendation.

Stripe processes hundreds of billions of dollars in payments and sits on one of the densest transactional datasets on the internet - the scale at which causal questions about fraud, conversion, and revenue actually become hard is exactly the environment where this work matters. I would welcome the chance to discuss how I can contribute this summer.

Sincerely,

AYMANE AIT DADS
