Hiring Team - AI Data Science Summer Associate

Tempus AI · Chicago, IL, USA

Dear Tempus AI Hiring Team,

Tempus AI's mission to deliver **real-time, actionable insights** from real-world evidence requires ML systems that generalize under genuine distribution shift - not just clean benchmarks. At EURECOM, I built exactly that: I ranked **#1 on the private leaderboard** by fine-tuning a **CLIP ViT-L/14 (428M parameters)** on 250K samples spanning 25+ generative model types, then proved through ablation studies that single-epoch fine-tuning preserves out-of-distribution generalization better than extended re-training - the kind of disciplined experimental thinking clinical AI demands.

Connecting model outputs to real decisions is where I focus my work. At Orange Maroc, I engineered an **end-to-end ML pipeline** across **100K+ telemetry records** using **Random Forest and KMeans**, reducing manual analysis time by **~60%** and mapping 5 user performance profiles directly to commercial service tiers - results presented to senior management via **Power BI dashboards**. Separately, I built a **transformer autoencoder** for unsupervised anomaly detection achieving **AUC 0.80** with no labeled anomalies, a setup directly analogous to rare-signal detection in clinical data.

Tempus has assembled one of the largest libraries of multimodal clinical data in oncology, and the Summer Associate role sits at the intersection of that data scale and direct physician impact - that specificity is why this role and not a generic data science position. I would welcome the chance to discuss how my experience translates to your real-world evidence platform.

Sincerely,

AYMANE AIT DADS
