Hiring Team - AI Video Research Engineer Intern

Tether Operations Limited · Remote

Dear Tether AI Hiring Team,

Your listing calls for hands-on experience with **large-scale visual AI models** and the ability to run rigorous research experiments - exactly what I delivered when I ranked **#1 on the EURECOM leaderboard** by fine-tuning **CLIP ViT-L/14** (428M parameters) on 250K images spanning 25+ generative model types, including Stable Diffusion, DALL-E, and GAN variants.

Where your role requires deep familiarity with **transformer fine-tuning** and controlled experimentation, I designed ablation studies across unfreezing depth (4/6/8 transformer blocks), learning rate schedules, and augmentation strategies - proving that **1-epoch fine-tuning** generalizes better than extended re-training. Where it requires production-aware ML engineering, I applied **FP16 mixed precision with GradScaler** and a **10-view test-time augmentation** pipeline to maximize inference robustness under real GPU constraints.

Tether is uniquely positioned at the intersection of financial infrastructure and frontier AI - building video research tooling at that scale is a problem worth solving rigorously. I would welcome the chance to discuss how my work on large vision models translates directly to your research roadmap.

Sincerely,

AYMANE AIT DADS
