## Hiring Team - Internship AI Software Development

CM.COM · Breda, Netherlands

Dear CM.COM Hiring Team,

Your posting calls for someone ready to work at the **frontier of AI-driven technology** and integrate AI into real software products - which is exactly what I have been doing at EURECOM. I ranked **#1 on the EURECOM leaderboard** for AI-generated image detection by fine-tuning a **428M-parameter CLIP ViT-L/14** on 250K samples, designing ablation experiments and engineering for real GPU constraints using FP16 mixed precision - not just running experiments, but shipping a production-grade system.

Integrating AI into day-to-day development requires both modeling depth and engineering discipline. At **Orange Maroc**, I owned an end-to-end **ML pipeline over 100K+ telemetry records**, reducing manual analysis time by **~60%** and delivering segmentation outputs that directly informed commercial decisions - the kind of real-life product contribution your teams build across **HALO** and your customer engagement platform. Separately, I built a transformer autoencoder for unsupervised fault detection achieving **AUC 0.80** with no labeled data, demonstrating the range from research to applied systems.

CM.COM sits at a rare intersection: a software company at its core that is actively rebuilding customer communication, payments, and agentic AI under one platform. The chance to contribute to **HALO** - an agentic AI system operating at global messaging scale - is exactly the kind of production environment I want to work in starting September 2026. I would welcome the opportunity to discuss how I can contribute to your development teams directly.

Sincerely,

AYMANE AIT DADS
