Hiring Team - ML Engineering Intern - LLM Research & Development

Prosus · Amsterdam, Netherlands

Dear Prosus AI Hiring Team,

Your requirement to **train, fine-tune, and serve open-source LLMs that power real products** is exactly the work I have been doing at EURECOM - most recently fine-tuning **CLIP ViT-L/14 (428M parameters)** on **250,000 training samples**, designing systematic ablation experiments across transformer block unfreezing depth and learning rate schedules, and ranking **#1 on the EURECOM private leaderboard** for out-of-distribution generalization.

On the engineering side, I applied **FP16 mixed precision with GradScaler** to fit a 428M-parameter model inside a T4 GPU budget - the kind of constraint that shows up constantly when moving from training runs to **production serving infrastructure**. Separately, at Orange Maroc I owned a full **end-to-end ML pipeline** over **100K+ telemetry records**, reducing manual analysis time by **~60%** and delivering segmentation outputs that directly informed commercial decisions - proof I can ship across the full ML lifecycle, not just notebooks.

Prosus sits at the intersection of consumer scale and applied AI research, and the Amsterdam team shipping LLM features into real e-commerce products - with engineers who have published at NeurIPS - is the exact environment where I want to spend the next 6 months. I would welcome the chance to discuss how I can contribute from day one.

Sincerely,

AYMANE AIT DADS
