**Hiring Team - Intern, Data Science Intern**

Activate Interactive Pte Ltd · Singapore

Dear Hiring Team,

Actxa's mission to deliver **personalized health insights** from domains like physical activity, sleep quality, and heart health requires ML systems that translate noisy real-world signals into evidence-based decisions - exactly what I built at Orange Maroc, where an **end-to-end ML pipeline** over **100K+ telemetry records** reduced manual analysis time by ~60% and directly informed commercial service tier decisions.

On the modeling side, I ranked **#1 on the EURECOM leaderboard** by fine-tuning a **428M-parameter CLIP ViT-L/14** on 250K samples - running structured ablation experiments across unfreezing depth, learning rate schedules, and augmentation strategies to maximize out-of-distribution generalization. Separately, I built a **KMeans segmentation** model that mapped 5 distinct user performance profiles to business outcomes, a framing directly applicable to Actxa's personalized health profiling across stress, recovery, and body composition signals.

Actxa's position at the intersection of wearable sensor data and preventive healthcare AI is a rare context where rigorous ML directly affects clinical-grade outcomes - not just dashboards. I would welcome the chance to discuss how my pipeline and modeling experience maps to your current data science roadmap.

Sincerely,

**AYMANE AIT DADS**
