Hiring Team - Software Development Intern

Intel Corporation · Santa Clara, USA

Dear Intel Data Center Requirements Hiring Team,

Your team builds **AI-enhanced requirements engineering** software that directly supports Intel's Data Center roadmap - exactly the intersection of ML systems and production engineering I have been building toward. At EURECOM, I ranked **#1 on the class leaderboard** for AI-generated image detection by fine-tuning a **428M-parameter CLIP ViT-L/14** on 250K samples, running rigorous ablation studies across unfreezing depth, learning rate schedules, and augmentation strategies to ship a model that generalizes out-of-distribution.

Translating **machine learning technologies** into decisions for high-level stakeholders is something I have done directly: at Orange Maroc, I engineered an end-to-end ML pipeline over **100K+ telemetry records** using **Random Forest and KMeans**, reducing manual analysis time by **~60%** and delivering executive-ready **Power BI dashboards** to senior management. Separately, I built a complete NLP pipeline - from TF-IDF through **transformer fine-tuning** - improving sentiment classification accuracy by **12 percentage points** over baseline, directly relevant to AI-assisted text-heavy requirements workflows.

Intel's Data Center group sits at the center of the infrastructure that runs modern AI workloads - the same workloads I optimize models for. Contributing software that accelerates how architects and program managers work on active silicon programs is a concrete problem I want to work on. I would welcome the chance to discuss how my background fits the team's current priorities.

Sincerely,

AYMANE AIT DADS
