Hiring Team - AI-Driven Software Dev Intern (Hybrid, Mexico)

Intel Corporation · Guadalajara, Mexico

Dear Intel Recruiting Team,

Your posting calls for work at the intersection of **intelligent automation** and **machine learning-driven analysis** - exactly what I built at Orange Maroc, where I engineered an **end-to-end ML pipeline** processing over 100K network telemetry records that reduced manual analysis time by roughly 60% and fed directly into executive-level decisions.

Two additional proof points map tightly to this role. First, on **data architecture and visualization**: I independently owned the full pipeline from raw ingestion to **Power BI** dashboards presented to senior management, surfacing 5 distinct user performance profiles that informed commercial service tier strategy. Second, on **machine learning-driven analysis**: I ranked **#1 on the EURECOM leaderboard** by fine-tuning a **428M-parameter CLIP ViT-L/14** model on 250K samples, running structured ablation studies across unfreezing depth, learning rate schedules, and augmentation strategies to prove which configurations generalize.

Intel's push to embed AI into core engineering workflows - from requirements automation to developer tooling - is exactly the kind of production-grade problem I want to work on. I would welcome the chance to discuss how my pipeline and modeling experience can contribute to your Guadalajara team this summer.

Sincerely,

AYMANE AIT DADS
