Hiring Team - AI Automation Intern

Antares Solutions · Australia

Dear Antares Solutions Hiring Team,

Your posting calls for someone to **design and build proof-of-value AI agents** that actually ship - starting with marketing automation and scaling to production. That is exactly the trajectory I followed at EURECOM, where I ranked **#1 on the class leaderboard** by taking a 428M-parameter **CLIP ViT-L/14** model from raw fine-tuning decisions to a production-ready inference pipeline validated against 25+ generator types - not a notebook demo, a deployed system built under real GPU and generalization constraints.

On the automation and pipeline side: at **Orange Maroc**, I independently engineered an **end-to-end ML pipeline** across **100K+ telemetry records**, reducing manual analysis time by **~60%** and delivering KMeans segmentation that directly mapped to commercial service tiers - output that reached senior management via **Power BI dashboards**. On the agent and LLM side, my transformer fine-tuning work spans vision, NLP sentiment pipelines, and unsupervised audio fault detection, giving me the cross-domain range your expanding agent scope requires.

Antares holds Advanced Specialisations in **Copilot and AI on Azure** - a stack where proof-of-value agents need to move fast from prototype to client deployment. That gap between experiment and shipped product is where I have consistently operated. I would welcome a conversation about how I can contribute to your current agent build-outs.

Sincerely,

AYMANE AIT DADS
