Hiring Team - Robotics AI Engineer Intern [IDA: 00031]

Aumovio · Singapore

Dear Aumovio Robotics R&D Hiring Team,

Your call for **Vision-Language Model (VLM) integration** to drive adaptive task planning in humanoid robotics maps directly to work I have already shipped: fine-tuning **CLIP ViT-L/14** (428M parameters) on 250K multi-source images spanning 25+ generator types, ranking **#1 on the EURECOM private leaderboard** for out-of-distribution-robust visual inference - exactly the kind of large-scale vision-language backbone your track targets.

On the **sensor data pipeline** side, I engineered an end-to-end ML pipeline processing **100K+ telemetry records** at Orange Maroc, reducing manual analysis time by **~60%** - demonstrating I can build the structured data flows needed to translate raw sensor feeds into actionable commands. On the modeling side, I designed systematic ablation studies across transformer unfreezing depth (**4/6/8 layers**) and applied **FP16 mixed precision with GradScaler** to operate within tight GPU budgets, the same engineering discipline required to optimize VLM inference on robotic hardware.

Aumovio's dual footing in production-grade automotive sensor systems and its new humanoid robotics R&D push in Singapore - backed by the scale and supply chain of the former Continental Automotive group - means real hardware and real deployment constraints, not sandbox research. I would welcome the chance to discuss how I can contribute to the VLM integration track starting this summer.

Sincerely,

AYMANE AIT DADS
