Hiring Team - AI Engineering Intern (m/f/d)

BIT Capital · Berlin, Germany

Dear BIT Capital Hiring Team,

Your posting calls for someone who can **develop LLM-powered tools** to automate workflows and integrate new data into investment research systems from Day 1. That is exactly how I operate: at EURECOM, I fine-tuned **CLIP ViT-L/14 (428M parameters)** on 250K samples and ranked **#1 on the private leaderboard** - not by running experiments in isolation, but by engineering a full inference pipeline with mixed precision, test-time augmentation, and ablation-driven decisions that held up on out-of-distribution data.

On the **APIs and databases** side, at Orange Maroc I built an end-to-end pipeline ingesting **100K+ live telemetry records**, applying KMeans segmentation and Random Forest modeling, and delivering outputs directly to executive dashboards - reducing manual analysis time by **~60%**. For **internal tooling**, I have consistently owned the full stack: raw data ingestion, model training, and production-ready reporting, which maps directly to contributing to the infrastructure BIT Capital uses to understand markets and companies.

BIT Capital sits at a rare intersection - a technology-first asset manager using AI to generate genuine investment edge rather than retrofitting it onto legacy workflows. I want to work where that distinction matters in practice. I would welcome a conversation about how I can contribute this summer in Berlin.

Sincerely,

AYMANE AIT DADS
