Hiring Team - Artificial Intelligence / Machine Learning - Intern

Bosch Research and Technology Center North America · Sunnyvale, California, USA

Dear Bosch RTC-NA Hiring Team,

Your **Foundation Model Powered AI Enablers** group is exactly where I want to work: your focus on scalable, transparent AI analytics across audio, images, and sensor logs maps directly to what I have already built. At EURECOM, I ranked **#1 on the private leaderboard** by fine-tuning **CLIP ViT-L/14** (428M parameters) on 250K samples spanning 25+ generative model types - designing ablation studies on unfreezing depth, learning rate schedules, and test-time augmentation to maximize out-of-distribution generalization.

Two results directly relevant to your **Industry 4.0** and **time-series analysis** work: first, I built a **transformer autoencoder** for unsupervised anomalous sound detection on industrial equipment, achieving **AUC 0.80** with no labeled anomalies - evaluated on a DCASE-style protocol against state-of-the-art baselines. Second, at Orange Maroc I engineered an **end-to-end ML pipeline** over **100K+ telemetry records** using Random Forest and KMeans, cutting manual analysis time by **~60%** and delivering segmentation outputs that directly informed commercial decisions.

Bosch RTC-NA's IEEE VIS best paper recognition signals a team that holds research to publication-grade rigor - the same standard I applied in my ablation experiments. I would welcome the chance to discuss how my experience fits your current foundation model projects; please feel free to reach me at [Aymane.Ait-dads@eurecom.fr](mailto:Ayman.Ait-dads@eurecom.fr).

Sincerely,

AYMANE AIT DADS
