Hiring Team - AI Automation & Prototyping Intern

Crisalix · Barcelona, Spain / Dubai, UAE / Lausanne, Switzerland

Dear Crisalix Hiring Team,

Your posting specifies that this role is about **using current AI and automation tools to quickly build prototypes and working solutions** - not theoretical research. That framing fits exactly how I work: at EURECOM, I ranked **#1 on the class leaderboard** by fine-tuning a **428M-parameter CLIP ViT-L/14** on 250K images across 25+ generator types, shipping a production-ready inference pipeline with test-time augmentation and FP16 optimization under real GPU constraints.

On the **end-to-end pipeline** side: at Orange Maroc I independently built an **ML pipeline over 100K+ telemetry records** using Random Forest and KMeans, reducing manual analysis time by **~60%** and delivering executive-ready **Power BI dashboards** directly used for go-to-market decisions - the kind of internal workflow improvement Crisalix describes. I also built a full NLP pipeline from TF-IDF to **transformer fine-tuning**, improving sentiment classification accuracy by **12 percentage points** over baseline.

Crisalix operates at the intersection of AI and aesthetic simulation for plastic surgery - a domain where fast, credible prototypes directly influence clinical and commercial adoption. I want to bring that same build-and-ship discipline to your team in Barcelona, Dubai, or Lausanne. I would welcome a conversation about how I can contribute from day one.

Sincerely,

AYMANE AIT DADS
