Hiring Team - AI Internships (UCY)

CYENS Centre of Excellence · Nicosia, Cyprus

Dear CYENS Hiring Team,

CYENS sits at the intersection of **interactive media, smart systems, and emerging technologies** - exactly the space where my strongest result lives: **ranked #1 on the EURECOM private leaderboard** for AI-generated image detection by fine-tuning **CLIP ViT-L/14 (428M parameters)** on 250K samples spanning 25+ generator types, with a submission pipeline built for out-of-distribution robustness using 10-view test-time augmentation.

Beyond vision, I bring the engineering discipline CYENS's applied research demands. At **Orange Maroc**, I built an end-to-end **ML pipeline on 100K+ telemetry records** - combining Random Forest, KMeans segmentation, and **Power BI dashboards** - reducing manual analysis time by **~60%** and directly informing commercial tier decisions. Separately, I designed rigorous **ablation studies** across transformer unfreezing depth (4/6/8 layers) and learning rate schedules, proving that single-epoch fine-tuning generalizes better than extended re-training - the kind of experiment-first thinking that fits a Max Planck-partnered research environment.

CYENS's collaboration structure - anchored by MPI, UCL, and the University of Cyprus - means intern work feeds into real research output, not isolated prototypes. I would welcome the chance to discuss how my vision and pipeline work maps to your current AI research tracks.

Sincerely,

AYMANE AIT DADS
