Hiring Team - Intern, AI Engineer

Ensign Infosecurity · Singapore

Dear Ensign Infosecurity Hiring Team,

Your requirement to **design and implement Agentic AI for Cyber Security** maps directly to work I have already done at the intersection of AI systems and adversarial contexts. At EURECOM, I ranked **#1 on the private leaderboard** for AI-generated image detection - a task that is fundamentally a cybersecurity problem: distinguishing authentic content from machine-generated forgeries across **25+ generator types** including Stable Diffusion, DALL-E, and GAN variants, at scale.

On the **AI model optimisation for deployment** side, I applied **FP16 mixed precision with GradScaler** to fit a **428M-parameter CLIP ViT-L/14** model within T4 GPU constraints, running ablation studies across unfreezing depth and learning rate schedules to prove 1-epoch fine-tuning generalises better than extended re-training. On the **machine learning operations and workflows** side, I independently shipped an end-to-end **PyTorch** pipeline at Orange Maroc covering **100K+ telemetry records**, reducing manual analysis time by **~60%** and delivering executive-ready dashboards to senior management.

Ensign operates at the center of Asia-Pacific cyber defence, and the specific focus on **AIOps pipeline security assessment** and agentic tooling with **LangChain and LangGraph** is exactly the production-facing AI engineering context I want to work in next. I would welcome the chance to discuss how my work fits your team's roadmap.

Sincerely,

AYMANE AIT DADS
