Hiring Team - Intern / Working Student - AI Engineering & Automation (m/f/d)

OMMAX · Munich, Germany

Dear OMMAX Hiring Team,

Your requirement to **develop, test, and deploy AI-based automation solutions** for real client use cases is exactly where I operate. At Orange Maroc, I independently owned an **end-to-end ML pipeline on 100K+ telemetry records** - from raw ingestion to executive-ready Power BI dashboards - cutting manual analysis time by 60% and directly informing go-to-market decisions. I do not prototype and hand off; I ship systems that get used.

On the **Python** and LLM tooling side: I fine-tuned a **428M-parameter CLIP ViT-L/14** model on 250K samples using Hugging Face Transformers, running rigorous ablation experiments across learning rate schedules and transformer unfreezing depth - the kind of systematic **prompt engineering** and model evaluation discipline that translates directly into building reliable **PoCs** with frameworks like LangChain. I also built automated **data handling and reporting pipelines** at Orange Maroc presented to senior management.

OMMAX sits at an uncommon intersection: strategy consulting operationalized through a dedicated AI Center of Excellence. That model - where AI engineers work directly alongside consultants to push automation into production for clients - is the environment where I want to build. I would welcome the chance to discuss how I can contribute starting this summer.

Sincerely,

AYMANE AIT DADS
