Hiring Team - Software Engineering Intern (AI/ML)

Revvity · Waltham, MA, United States (Remote)

Dear Revvity Hiring Team,

Your internship calls for someone who can **research and apply AI/ML solutions to real-world business cases** - that is exactly what I did at EURECOM, where I ranked **#1 on the private leaderboard** by fine-tuning a **428M-parameter CLIP ViT-L/14** on 250K samples spanning 25+ image generator types, running structured ablation experiments across unfreezing depth, learning rate schedules, and augmentation strategies to prove what actually generalizes.

On the **data and analysis** side, I engineered an end-to-end **ML pipeline on 100K+ network telemetry records** at Orange Maroc, combining **Random Forest and KMeans** to identify the top 3 network-quality drivers and cut manual analysis time by **~60%** - results delivered directly to senior management via **Power BI** dashboards. For **software testing and quality assurance**, I benchmarked competing architectures (CNN, DenseNet121, CNN-Transformer hybrid) with cross-validated evaluation protocols, reaching **99.8% accuracy** on aerial image classification.

Revvity's position at the intersection of life science instrumentation and software - building end-to-end solutions that move from lab data to clinical insight - is exactly the domain where ML needs to be production-grade, not experimental. I would welcome the chance to discuss how I can contribute to that work this summer.

Sincerely,

AYMANE AIT DADS
