Hiring Team - Software Engineer, Data Science (Intern)

Screening Eagle Technologies SA · Singapore

Dear Screening Eagle Hiring Team,

Your requirement to **develop tools that process high volumes of data collected by cameras and NDT tools** maps directly to work I have already shipped: fine-tuning **CLIP ViT-L/14 (428M parameters)** on **250K images spanning 25+ generator types** to rank **#1 on the EURECOM private leaderboard** for AI-generated image detection - a task that demanded both computer vision depth and the engineering discipline to handle large-scale visual data under real GPU constraints.

Screening Eagle's focus on **uncovering hidden data correlations** - such as detecting corrosion presence from inspection signals - connects directly to two other things I have built. At **Orange Maroc**, I engineered an ML pipeline over **100K+ network telemetry records** using **Random Forest and KMeans**, cutting manual analysis time by **~60%** and mapping 5 user profiles to commercial tiers. Separately, I built a **transformer autoencoder** for unsupervised fault detection on industrial audio - no labeled anomalies required - reaching **AUC 0.80** on a DCASE-style protocol, which is directly analogous to detecting defect signatures in **Ground Penetrating Radar** data.

Screening Eagle sits at the intersection of physical-world inspection and software intelligence - applying ML to NDT data that most teams never touch. That specificity is exactly the kind of constrained, high-stakes problem I want to work on. I would welcome the chance to discuss how my background fits the team's current priorities.

Sincerely,

AYMANE AIT DADS
