Hiring Team - Disney Research Studio Intern

The Walt Disney Company · Zurich, Switzerland

Dear Disney Research Studio Hiring Team,

Your requirement for **image and video processing research** with a **proven track record of achieving significant results** maps directly to what I have already shipped: ranked **#1 on the EURECOM private leaderboard** by fine-tuning a **428M-parameter CLIP ViT-L/14** on 250,000 images spanning 25+ generative model types - Stable Diffusion, DALL-E, Midjourney, and GAN variants - delivering robust out-of-distribution detection at production scale.

Two additional proof points aligned to your qualifications: first, I designed and documented full **ablation studies** across transformer block unfreezing depth (4, 6, and 8 layers), learning rate schedules, and augmentation strategies - the kind of rigorous **deep learning** experimentation your senior researchers expect from a collaborator. Second, I built a **transformer autoencoder** for unsupervised anomalous sound detection achieving **AUC 0.80** with no labeled anomalies, demonstrating experience across both **image processing** and signal-domain **machine learning**.

Disney Research Zurich sits at the intersection of visual storytelling and foundational computer vision - the group's published work on image synthesis and neural rendering is exactly the research environment where my computer vision and transformer fine-tuning experience can contribute immediately. I would welcome the chance to discuss how I can support your current projects during a 3 to 4 month internship starting this summer.

Sincerely,

AYMANE AIT DADS
