Hiring Team - AI Developer Intern (m/w/d)

Trusteq · Germany

Dear Trusteq Hiring Team,

Your requirement to support the **integration of generative AI technologies** into existing software - and to evaluate and optimize AI components using frameworks like **LangChain** and APIs like **OpenAI or Ollama** - maps directly to what I have already shipped: ranked **#1 on the EURECOM leaderboard** by fine-tuning a 428M-parameter CLIP model on 250K images across 25+ generative model types, including Stable Diffusion, DALL-E, and Midjourney outputs.

On the **data preparation and evaluation** side, I engineered an end-to-end ML pipeline at **Orange Maroc** covering **100K+ telemetry records**, reducing manual analysis time by **~60%** and mapping segmentation results directly to business decisions. On the optimization side, I ran structured ablation experiments varying transformer block unfreezing depth (**4/6/8 layers**), learning rate schedules, and augmentation strategies - exactly the kind of rigorous AI component evaluation your role requires.

Trusteq's focus on embedding AI into real software products - rather than treating it as a standalone research exercise - is precisely the environment where I work best. I would welcome the chance to discuss how I can contribute to your team starting this summer.

Sincerely,

AYMANE AIT DADS
