Hiring Team - Intern, ML Algorithms

FUTUREWEI TECHNOLOGIES · Santa Clara, CA, USA

Dear Hiring Team,

Your posting calls for experience in **multi-modal representation learning** and **large language models** - two areas where I have shipped measurable results. Fine-tuning **CLIP ViT-L/14** (428M parameters) on 250,000 images spanning 25+ generator types, I ranked **#1 on the EURECOM private leaderboard** for AI-generated image detection, running rigorous ablation studies across transformer block unfreezing depth, learning rate schedules, and test-time augmentation strategies to prove what actually generalizes.

On the **ML foundations** side, I engineered an end-to-end **ML pipeline** over **100,000+ network telemetry records** at Orange Maroc - combining Random Forest with KMeans segmentation to identify the top 3 network-quality drivers and reduce manual analysis time by **~60%**. For model efficiency under real GPU constraints, I applied **FP16 mixed precision with GradScaler** and designed a 10-view TTA protocol, directly addressing the ML life cycle and architecture design concerns listed in your qualifications.

FUTUREWEI's IC-Lab sits at the intersection of foundational ML research and publication-grade output - a rare combination of theory and systems thinking that maps directly to how I work. I would welcome the chance to discuss how my background fits your current research directions.

Sincerely,

AYMANE AIT DADS
