Hiring Team - Intern - 6G Robotics, AI and ISAC Prototyping

Huawei Heisenberg Research Center · Munich, Germany

Dear Huawei AWTL Hiring Team,

Huawei's Advanced Wireless Technologies Lab sits at the intersection of **AI, robotics, and next-generation intelligent systems** - exactly where I have been building. At EURECOM, I ranked **#1 on the class leaderboard** for AI-generated image detection by fine-tuning a **428M-parameter CLIP ViT-L/14** on 250K samples across 25+ generator types, running rigorous ablation studies on transformer unfreezing depth, learning rate schedules, and test-time augmentation strategies to maximize out-of-distribution robustness - the kind of disciplined prototyping that translates directly from research to real-world deployment.

On the signal-processing side, I built a **transformer autoencoder for unsupervised anomalous sound detection** on industrial audio, achieving **AUC 0.80** with no labeled anomalies - using Mel spectrograms and SpecAugment on a DCASE-style benchmark, matching state-of-the-art baselines. Separately, at Orange Maroc I engineered an **end-to-end ML pipeline on 100K+ network telemetry records** using **Random Forest and KMeans**, reducing manual analysis time by **60%** and directly informing commercial network-tier decisions - experience that maps onto 6G sensing and ISAC data workflows.

Huawei Heisenberg Research Center is one of the few labs in Europe where 6G ISAC prototyping moves from whiteboard to hardware within a single team - that engineering-to-research proximity is specifically what I am looking for. I would welcome the chance to discuss how my work fits your current prototyping roadmap.

Sincerely,

AYMANE AIT DADS
