Hiring Team - Data Science and AI Intern

BillionToOne · Newark, California, USA

Dear BillionToOne Hiring Team,

Your call for someone to **"build and maintain scalable data pipelines"** and **"implement AI-driven automation solutions"** maps directly to what I have already shipped in production: at Orange Maroc, I engineered an **end-to-end ML pipeline** processing over **100K+ network telemetry records**, reducing manual analysis time by roughly 60% and delivering segmentation outputs that fed directly into executive go-to-market decisions.

On the AI side, I ranked **#1 on the EURECOM leaderboard** by fine-tuning **CLIP ViT-L/14 (428M parameters)** on **250K samples** - running rigorous ablation studies across unfreezing depth, learning rate schedules, and augmentation strategies to maximize out-of-distribution generalization. For your **laboratory and billing operations** automation goals, I bring the same discipline: feature engineering, cross-validated modeling, and pipeline ownership from raw ingestion to stakeholder-ready output.

BillionToOne's UNITY Complete test - combining cfDNA-based aneuploidy screening with carrier status in a single draw - represents exactly the kind of 10x diagnostic leap where clean, automated data infrastructure is not optional but foundational. I want to help build that infrastructure. I would welcome the chance to discuss how my background fits your current priorities.

Sincerely,

AYMANE AIT DADS
