Hiring Team - AI Research & Development Intern

Cynapse · United States (Global)

Dear Cynapse AI Team,

Your requirement to **"conduct rigorous experiments to validate model performance, including data preparation, evaluation, and benchmarking"** is precisely what I did to rank **#1 on the EURECOM leaderboard** for AI-generated image detection - fine-tuning **CLIP ViT-L/14 (428M parameters)** on 250K samples spanning 25+ generator types, with systematic ablation studies across unfreezing depth, learning rate schedules, and augmentation strategies that proved 1-epoch fine-tuning generalizes better than extended re-training.

On the **Computer Vision** side, I designed **10-view test-time augmentation** for out-of-distribution-robust inference using **FP16 mixed precision with GradScaler** - the kind of practical engineering your role calls for when implementing solutions that reach real customers. On the **LLM and prototype** side, I built a complete transformer-based NLP pipeline from TF-IDF through **word2vec** to fine-tuned transformers, improving sentiment classification accuracy by **12 percentage points** over baseline.

Cynapse sits at the intersection of **Agentic AI** and video intelligence for high-stakes environments - roads, seaports, airports - where a model failure is not just a metric drop but an operational risk. That constraint matches how I approach every system I build. I would welcome the chance to discuss how my work fits your AI Product group's roadmap.

Sincerely,

AYMANE AIT DADS
