Hiring Team - Applied AI Engineering Intern

d-Matrix · Santa Clara, CA, USA

Dear d-Matrix Hiring Team,

Your posting asks for someone who can **cluster failure signatures** and help engineers skip weeks of manual triage - that maps directly to what I built at Orange Maroc: an **end-to-end ML pipeline** on **100K+ network telemetry records** that applied KMeans clustering to surface the top 3 network-quality failure drivers, reducing manual analysis time by roughly 60% and feeding results directly into business decisions.

On the **LLM-powered pipelines** side, I have hands-on experience fine-tuning transformers end-to-end: I ranked **#1 on the EURECOM leaderboard** by fine-tuning **CLIP ViT-L/14 (428M parameters)** on **250K training samples** spanning 25+ generator types, applying **FP16 mixed precision** and systematic ablation studies across unfreezing depth and learning rate schedules to optimize both performance and compute budget - exactly the kind of disciplined, production-aware model work your Intelligent Manufacturing Systems team needs.

d-Matrix sits at a rare intersection: pushing generative AI inference directly into hardware-constrained production environments, where model efficiency is not optional. That constraint-first engineering philosophy is what drew me here specifically. I would welcome the chance to discuss how my work fits the team's current priorities.

Sincerely,

AYMANE AIT DADS
