Hiring Team - Abingdon_Computer Science/Data Science/Artificial Intelligence Intern

Halliburton · Abingdon, United Kingdom

Dear Halliburton AI Foundation Team,

Your **AI Foundation team** is building next-generation AI systems for the global energy industry - exactly the kind of production-grade challenge I have been preparing for. At EURECOM, I ranked **#1 on the private leaderboard** for AI-generated image detection by fine-tuning **CLIP ViT-L/14 (428M parameters)** on 250K samples spanning 25+ generator types, running rigorous ablation studies across transformer unfreezing depth and learning rate schedules to prove which configurations generalize rather than overfit.

At **Orange Maroc**, I engineered an end-to-end **ML pipeline** over **100K+ network telemetry records** - combining Random Forest, KMeans segmentation, and feature engineering - reducing manual analysis time by **~60%** and delivering user-performance profiles that directly informed commercial service decisions. Separately, I built a **transformer autoencoder** for unsupervised fault detection on industrial audio achieving **AUC 0.80** with no labeled anomalies, a methodology directly transferable to equipment monitoring in energy operations.

Halliburton's scale as one of the world's largest energy services providers means AI models built in Abingdon ship into real subsurface and operational workflows - not sandboxes. I would welcome the chance to discuss how my pipeline engineering and transformer fine-tuning experience can contribute to your team this summer.

Sincerely,

AYMANE AIT DADS
