Hiring Team - Data & Machine Learning Intern

Kogan.com · Melbourne, Australia

Dear Kogan Hiring Team,

Kogan's stated goal - **"testing, learning, and embedding new capabilities into your stack daily"** - describes exactly how I approached fine-tuning **CLIP ViT-L/14 (428M parameters)** on 250K images: systematic ablations across unfreezing depth, learning rate schedules, and augmentation strategies that landed me **ranked #1 on the EURECOM private leaderboard** out of the full class cohort.

On the data engineering side, at **Orange Maroc** I built an **end-to-end ML pipeline** over **100K+ live telemetry records** - from raw ingestion through **Random Forest + KMeans** modeling to executive Power BI dashboards - cutting manual analysis time by **~60%** and directly mapping 5 user segments to commercial service tiers. Both experiences reflect what Kogan means by **"real work"**: pipelines that produce decisions, not just outputs.

Kogan is the rare eCommerce company that treats its own tech stack as a product - building recommendation and personalisation infrastructure in-house rather than buying off the shelf. That is the kind of environment where I want to ship. I would welcome the chance to discuss how I can contribute to your ML team this summer.

Sincerely,

AYMANE AIT DADS
