Hiring Team - Data & Machine Learning Intern

Kogan.com · Melbourne, Australia

Dear Kogan.com Hiring Team,

Kogan.com's stated goal - **testing, learning, and embedding new AI capabilities into your stack daily** - is exactly the operating mode I have been trained in. At EURECOM, I ranked **#1 on the class leaderboard** for AI-generated image detection by fine-tuning a **428M-parameter CLIP ViT-L/14** on 250K samples, running systematic ablation studies across unfreezing depth, learning rate schedules, and augmentation strategies until the model was genuinely production-ready - not just leaderboard-ready.

At **Orange Maroc**, I owned an end-to-end **ML pipeline on 100K+ live telemetry records** - from raw ingestion through Random Forest and KMeans modeling to executive Power BI dashboards - cutting manual analysis time by **~60%** and directly shaping commercial service tier decisions. Separately, I built a complete NLP sentiment pipeline moving from TF-IDF to **transformer fine-tuning**, gaining **12 percentage points** over baseline - the kind of iterative, measurable improvement a fast-paced eCommerce data team can actually use.

Kogan.com processes millions of customer interactions across one of Australia's largest eCommerce platforms, and the ML problems that come with that scale - personalisation, demand forecasting, catalogue intelligence - are exactly where my pipeline and modelling work translates. I would welcome the chance to discuss how I can contribute to your team starting this summer.

Sincerely,

AYMANE AIT DADS
