Hiring Team - Data Science (Cardiac) Intern

Perspectum · Oxford, United Kingdom

Dear Perspectum Hiring Team,

Your role calls for **cutting-edge deep learning applications for large-scale medical image analysis** - exactly the intersection where my work lives. At EURECOM, I ranked **#1 on the class leaderboard** by fine-tuning **CLIP ViT-L/14 (428M parameters)** on 250,000 images spanning 25+ generator types, designing test-time augmentation strategies for out-of-distribution robustness - the same generalization discipline that matters when cardiac MRI data is scarce and heterogeneous.

On **researching new methods and validating prototypes**, I have direct experience: I ran structured **ablation studies** across transformer unfreezing depth (4/6/8 layers), learning rate schedules, and augmentation strategies, then documented which configurations preserved generalization. Separately, at Orange Maroc I owned an **end-to-end ML pipeline on 100K+ records** - from raw ingestion to cross-validated evaluation - reducing manual analysis time by **60%**, which mirrors the pipeline-to-prototype translation your team needs.

Perspectum's LiverMultiScan and CoverScan products sit at a rare intersection of quantitative imaging biomarkers and clinical deployment at scale - the cardiac expansion of that platform is exactly where rigorous model validation separates research from clinical utility. I would welcome the chance to discuss how I can contribute to that work.

Sincerely,

AYMANE AIT DADS
