Hiring Team - Machine Vision Intern

RedTech Recruitment · United Kingdom

Dear Hiring Team,

Your listing calls for someone excited by the intersection of **hardware, data, and intelligent systems** - that intersection is exactly where my strongest result lives. I ranked **#1 on the EURECOM class leaderboard** for machine vision by fine-tuning **CLIP ViT-L/14** (428M parameters) on 250K images spanning 25+ generator types, designing a full inference pipeline with 10-view test-time augmentation to stay robust on out-of-distribution samples.

On the **data collection and software tooling** side, I engineered an end-to-end ML pipeline over **100K+ telemetry records** at Orange Maroc - handling raw ingestion, feature engineering, cross-validated modeling, and executive-ready dashboards - cutting manual analysis time by **~60%**. On the vision modeling side, I ran structured ablation experiments varying transformer unfreezing depth (**4/6/8 layers**) and augmentation strategies, proving that disciplined experimentation beats brute-force re-training for generalization.

RedTech's focus on real-world sensor deployment and hands-on machine vision at a growing UK AI start-up maps directly to what I want to build next - systems that leave the notebook and hit the physical world. I would welcome a conversation about how I can contribute from day one.

Sincerely,

AYMANE AIT DADS
