Hiring Team - Intern - AI Research

Samsung Advanced Institute of Technology Cambridge · Cambridge, United Kingdom

Dear SAIC Cambridge Hiring Team,

Your internship explicitly targets candidates capable of **publishing research in top conferences** and **filing patents** - the kind of output that demands both rigorous experimentation and engineering depth. My closest proxy: ranked **#1 on the EURECOM private leaderboard** for AI-generated image detection by fine-tuning **CLIP ViT-L/14 (428M parameters)** on 250K samples, with ablation studies across unfreezing depth, learning rate schedules, and augmentation strategies documented well enough to surface a non-obvious finding - that 1-epoch fine-tuning generalizes better than extended re-training.

On the **reproducible code** and applied research side: I designed a **10-view test-time augmentation** protocol for out-of-distribution-robust inference across **25+ generator types** (Stable Diffusion, DALL-E, GAN variants), and implemented **FP16 mixed precision with GradScaler** to stay within a T4 GPU budget without sacrificing model scale - exactly the systems-aware research discipline a **cross-disciplinary research centre** targeting commercial tech transfer requires. Separately, a transformer autoencoder for unsupervised audio fault detection reached **AUC 0.80** with zero labeled anomalies, benchmarked on a DCASE-style protocol.

SAIC Cambridge sits at the intersection of basic and applied AI research with a direct path to Samsung product integration - a rare setup where a result from a 6-month internship can realistically reach a billion-device ecosystem. I would welcome the chance to discuss how my work fits your current research agenda.

Sincerely,

AYMANE AIT DADS
