Hiring Team - 2026 Intern - Data Scientist

Adobe Inc. · San Jose, CA, USA

Dear Adobe Data Science Hiring Team,

Your team is building **automated evaluation pipelines using LLM-as-a-judge systems** to measure AI Assistant quality across Adobe Experience Platform - a problem that sits at the intersection of ML rigor and product impact. That is exactly where I have been operating: at EURECOM, I ranked **#1 on the class leaderboard** by fine-tuning **CLIP ViT-L/14 (428M parameters)** on 250K samples to detect AI-generated images across 25+ generator types, designing ablation experiments that directly informed model evaluation methodology.

On the **user interaction data analysis** side, at Orange Maroc I engineered an end-to-end **ML pipeline over 100K+ network telemetry records** using Random Forest and KMeans, cutting manual analysis time by **~60%** and mapping 5 distinct user performance profiles directly to commercial service tiers - the same pattern of extracting behavioral signals to inform business decisions that your team applies to AI Assistant conversation data. I also built a complete **NLP pipeline** covering tokenization, TF-IDF, word2vec, and transformer fine-tuning, improving sentiment classification accuracy by **12 percentage points** over baseline.

Adobe is uniquely positioned here - AEP processes behavioral data at a scale few platforms match, and the AI Assistant quality measurement problem is genuinely unsolved territory. I would welcome the chance to discuss how my work on evaluation design and pipeline engineering translates to your team's roadmap for Summer 2026.

Sincerely,

AYMANE AIT DADS
