Hiring Team - Intern AI Developer (Generative AI & RAG)

CGI · Sophia Antipolis, France

Dear CGI Hiring Team,

Your posting calls for someone who will connect **Large Language Models** with internal knowledge bases to build **enterprise-class systems** - not theoreticians, but engineers who ship. I am that profile: a Data Science Engineering student at EURECOM who fine-tuned a **428M-parameter CLIP ViT-L/14** on 250K samples and ranked #1 on the EURECOM private leaderboard, running rigorous ablation studies across transformer unfreezing depth and learning rate schedules to maximize real-world generalization - not just benchmark performance.

On the engineering side, I built an **end-to-end ML pipeline** over **100K+ telemetry records** at Orange Maroc, reducing manual analysis time by **~60%** and delivering outputs directly used in go-to-market decisions - the same standard of production-grade, business-facing work your **proposal automation** use case demands. Separately, I built a full **NLP pipeline** from TF-IDF through **transformer fine-tuning**, gaining the exact retrieval-and-generation intuition that underpins **RAG architecture** design.

CGI's focus on building ready-made, reusable AI products for enterprise clients - rather than one-off prototypes - matches exactly how I approach systems: with an eye on generalization, business constraints, and handoff quality. I would welcome the chance to discuss how I can contribute to your Generative AI work this summer.

Sincerely,

AYMANE AIT DADS
