Hiring Team - 2027 Applied Science Intern (Machine Learning, Recommender Systems), Amazon International Machine Learning

Amazon · Sydney, Australia

Dear Amazon International Machine Learning Hiring Team,

Your listing calls for applying **state-of-the-art Deep Learning** algorithms on **large datasets** to solve real-world problems - which maps directly to what I did when I ranked **#1 on the EURECOM leaderboard** by fine-tuning a 428M-parameter CLIP ViT-L/14 on 250K training samples spanning 25+ generator types, designing ablation studies across unfreezing depth and learning rate schedules to prove that 1-epoch fine-tuning generalizes better than extended re-training.

On the **NLP and information retrieval** side, I built a full sentiment pipeline progressing from TF-IDF through word2vec embeddings to **transformer fine-tuning**, gaining 12 percentage points over baseline - directly relevant to the ranking and retrieval modeling at the core of recommender systems. At Orange Maroc, I engineered an **end-to-end ML pipeline** over **100K+ telemetry records** using Random Forest and KMeans, reducing manual analysis time by ~60% and mapping 5 user profiles to commercial service tiers - the kind of cross-disciplinary, business-grounded modeling your team operates on.

Amazon's international ML teams in Australia are at the intersection of large-scale retrieval and personalization for a customer base that demands low-latency, high-relevance recommendations across diverse markets - a scope I want to contribute to directly. I would welcome the chance to discuss how my background fits the team's work.

Sincerely,

AYMANE AIT DADS
