Hiring Team - Forward Deployed Engineer

Isidor · London, United Kingdom

Dear Isidor Hiring Team,

Isidor is looking for engineers who can **translate ambiguous research needs into high-leverage technical systems** - exactly what I did at Orange Maroc, where I independently owned a full **end-to-end ML pipeline** on **100K+ live telemetry records**, from raw data ingestion to executive-ready dashboards, reducing manual analysis time by ~60% and directly informing go-to-market decisions.

On the **data wrangling and preprocessing** side: at EURECOM I cleaned and prepared **250K training samples** spanning 25+ generator types to fine-tune **CLIP ViT-L/14 (428M params)**, ranking **#1 on the private leaderboard**. On **machine learning workflow** rigor: I ran structured ablation experiments across transformer block unfreezing depth, learning rate schedules, and augmentation strategies - then documented exactly why **1-epoch fine-tuning** generalizes better than extended retraining.

Isidor was founded to make evaluation as measurable and reproducible as training itself - that framing is precise in a way most AI infrastructure companies are not, and it matches how I actually build. I would like to discuss how I can contribute to the pipelines you are shipping with frontier labs.

Sincerely,

AYMANE AIT DADS
